

The little revolution

The little revolution: the $eco-N_2$ vessel filler system with an integrated pressurised gas cylinder for diaphragm expansion vessels. Pure nitrogen, the highest efficiency and a number of other convincing advantages. It's time to change!

Sotin eco-N₂

the progressive way to fill a diaphragm expansion vessel

Why should anything be complicated (and uneconomical and impractical and so on) when it can be easy? But how could it be both economical and practical? That was precisely the challenge that spurred on our sales and development specialists. And they came up with an answer: The SOTIN eco- N_2 – the little box of wonders among the vessel fillers for diaphragm expansion vessels.

The background: Up to now, the non-combustible refrigerant R-134a has been used in vessel fillers. However, in 2014, the EU decided to phase out this fluorinated greenhouse gas and it may now only be present at very low levels in vessel fillers. The replacement was less harmful but also much less economical. So we did our homework.

The result: an innovative vessel filler system with a replaceable pressurised gas cylinder. It only contains nitrogen, so it is climate-friendly. The benefits to you: It is compact, easy to use, economical and safe to handle.

- ready & easy to use
- can be used between -20 °C & +60 °C
- can also be left in the car over the winter

- rapid, thanks to the high filling pressure
- it can also be used for diaphragm expansion vessels for solar & potable water systems

• non-flammable & safe

BENEFITS = FACTS

- climate-friendly
- the pressurised gas cylinder is 100% disposable

- economical & highly efficient
- also suitable for large diaphragm expansion vessels

• 100 % Made in Germany

Item no. 910-1000: Sotin eco-N₂-kit incl. one pressurised gas cylinder and valve key

Item no. 555-1: Sotin eco-N₂ vessel filler, 670 ml/pressurised gas cylinder

Item no. 910-1006: Sotin eco-N₂ valve key for pressurised gas cylinder

The first compact nitrogen filling system for diaphragm expansion vessels*

*Protected utility model
